

SOFTWARE TESTING FUNDAMENTALS

Dr.P.Keerthika/Associate Professor/Department of
CSE/ Kongu Engineering College

Software Testing

- Software testing is the process of evaluating a developed system to assess the quality of the final product or computer software.
- The purposes of software testing are to discover errors, mistakes, and flaws in the developed software and to ensure that software satisfies the specified requirements of customers.

- Software testing is a crucial part of the software development cycle.

Why Testing is important?
