1. Introduction

Following test plan is intended to define the range, approach and schedule of all testing activities in the **Allegro Sandbox** project. The document is addressed to the entire project delivery team.

The plan identifies the areas to be tested (registration, logging in, changing the language, account's settings and others) and non-tested (vouchers and coupons), the types of tests to be performed (smoke tests, exploratory session, regression, functional, cross-browser), people responsible for specific activities, the resources and the schedule required to complete the activities described.

1.1. Range

1.1.1. Areas to be tested

The following table indicates the areas that fall within the range of functionality being tested.

Module name	Description
Registration of a regular account	User registration for individual client via mail
Registration of a company account	User registration for business clients via mail
User log-in	Logging in via e-mail
Language change	Trying the language options on the site
Account's settings	Trying settings' options
Others	Exploratory session

1.1.2. Non-tested areas

The table below indicates the areas that will not be tested and analysed. The description column indicates the reason that prevents the functionality from being tested.

Module name	Description
Discount vouchers and coupons	No possibility to generate test data
Payments	Functionality not fully delivered; the tests will take place at a later date

1.2. Purpose of the tests

The aim of the tests is to verify the basic functionality and assess the quality of the software in its current version. The test process is to discover defects before the phase of delivering the application to the client and confirm it has been implemented as required. The result will be confirmed by a report on the executed activities.

2. Types of tests

The following list indicates the types of tests that will be carried out in the project:

- smoke tests
- exploratory session
- regression - based on previously created test scenarios
- functional
- cross-browser

3. Tests results

The results of the tests will be provided in the form of a final report. The report will include a list of tested functionalities with their status, a list of defects found and their priority, and the final result.

4. Resources and environment

4.1. Tests tools

- Logging and bug tracking tool - Google Docs
- Generating test data - Bug Magnet
- Screenshots - Apple screenshots
- Screencasts - QuickTime Player

4.2. Tests devices and environment

- Macbook Air (13-inch, Early 2015), MacOS Monterey version 12.6.7
- Web browsers:
    - Chrome version 114.0.5735.133
    - Safari version 15.6.1
    - Firefox 115.0.2

5. Schedule of tests

Tests will be carried out from 10.07.2023 to 14.07.2023

The table below indicates the detailed action plan, together with the priority of the functionality (on a scale from 1 [lowest] to 5 [highest]).

Module	Priority	Date	Time	Tester
Registration	5	10.07.2023	4 hours	Paulina Rybicka
Logging in	5	11.07.2023	2 hours	Paulina Rybicka
Changing the language	4	12.07.2023	2 hours	Paulina Rybicka
Account's settings	4	13.07.2023	4 hours	Paulina Rybicka
Others	2	14.07.2023	2 hours	Paulina Rybicka

6. Summary of the plan

The above plan focuses on testing key functionalities of the Allegro Sandbox application, such as registration, logging in, changing the language, accounts' settings and others. The following tests are planned: smoke tests, exploratory session, regression, functional and cross-browser. The application will be tested on Apple device using the Google Chrome, Safari and Firefox browsers. Tools that will help in the process include Google Docs, Bug Magnet, QuickTime Player.

The document should be approved by the Project Manager by 07.07.2023. Once approved, the relevant environments and tools will be prepared and all testing activities will be carried out according to the above schedule.
